Excerpt: . of each other, for on this theory we may add the illusion of A to the illusion of B and take the sum of these as the expression of the illusion of either A or B in terms of the other. Thus The error involved by substituting the actual figures is 5 for the first equation and 7 for the second. Although these are extreme cases the error of the substitution is no greater than that found when the mean, C, was used as a standard. Therefore, within obvious limits, we are justified in choosing the standard of any convenient size in measurements like these. Just as no one now claims an exact mathematical conformity for Weber's law in any sense, we must construe the above formula liberally. There may be some more determinable factors that must be taken into it; we can never...
