Let us notice what is meant by Algebraic Quantity, and how the notion of it may originate. The primitive conception of number is used when we enumerate the marbles in a box, and say: 0, 1, 2, 3, 4, etc. Our simple scale is arithmetical quantity, and it runs down to a definite nothing, or zero, and stops. But let us attempt to apply this scale in the measurement of other things. Suppose we are estimating time. Where is the zero from which all time is to be measured in one direction, or sense? There is no such zero, as in the case of the marbles; for you can conceive of no event so far past but what other events preceded it. We are forced to select a standard event, and measure the time of other events with reference to the lapse before or after that. The zero used is an arbitrary one, and there is quantity in...
